**DETAILED ACTION**

***Election/Restrictions***

Claims 1- 80 are pending in this application.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

**Group I.** Claims 1-51 , drawn to a solar device, classified in class 136, subclass 255.

**Group II.** Claims 52-64 , drawn to process of making a semiconductor device, classified in class 438, and subclass 085 .

**Group III.** Claims 65-80, drawn to vacuum sputtering Apparatus, classified in class 118, and subclass 718 .

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of following can be shown: (1) that the process as claimed can be use to make other and materially different product or by hand, or (2) that process as claimed can be made by another and materially different process. (MPEP § 806.05(f)). In the instance case unpatentabilities of the group I invention would not necessarily imply unpatentability of the group II invention, since the device of the group I invention could be made by the processes materially different from those of the group II invention, for example, in the claim 9, the product as claimed can be made by another and materially different process such as semiconductor is formed through the use a CVD process instead of a RF sputtering method.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the fields of

search are not co-extensive. Therefore, separate examination would be required and restriction for examination purposes as indicated is proper.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group II and Group III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case. In the instance case unpatentabilities of the group II invention would not necessarily imply unpatentability of the group III invention, since the apparatus of the group II invention could be made by the processes materially different from those of the group III invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the fields of search are not co-extensive. Therefore, separate examination would be required and restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
